A WORD FROM DUNCAN

A CHANGING PLAYING FIELD

Managing Director of Renttech SA Duncan Whitehead reflects on 2019, its negatives and positives, as well as what Renttech is doing to ensure you – our valued customers – get the best products and service possible:

2019 has been a challenging year in which changes and challenges have abounded. To quote a well-known classic, it has been 'the best of times and the worst of times' for South Africa as a country. Economics, the exchange rate and parastatals such as our power utility and national airline continue to come under fire.

Notwithstanding this, on a very positive note, we experienced one of our best days in a long time when the Springboks won the 2019 Rugby World Cup in October: a much-needed boost to our pride and confidence as a nation.

However, despite this highlight in an otherwise challenging year, the pressure is on in a big way - in the construction sector particularly. To ensure our customers continue to receive the best products and service, we must constantly sharpen our skills, service and our wits,

DUNCAN WHITEHEAD
Managing Director

in order to differentiate ourselves from the competition, and remain deserving of your loyalty.

On this point, the 35,000 items that we have in our inventory represents a very substantial investment in the value of our company. However, of by far the greatest importance to Renttech are all of you – our valued customers. The driving question we ask ourselves daily – and upon which our operational ethos is based – is the following: "How can we provide greater benefit and value to our customers?"

ON YOUR TEAM

- IN A GAME-CHANGING WAY

As South Africans, we were all incredibly proud when we watched the Springboks win the prestigious and much-coveted Rugby World Cup in October. In a similar way, in order to win – and retain – you, our valued customers - we work hard to ensure we are 'on the field' with you, ensuring you get possession, driving the scrum forward and opening up opportunities for you as we 'play the ball'!

We also know that to win this game, our customers need to see that Renttech is based on integrity and honesty. There must be absolutely no question in our customers' minds that they can rely on these two vital aspects of Renttech's operational and business ethos. Further to this, loyalty to our customers is also absolutely paramount.

Hand-in-hand with affordable pricing go the equally important aspects of quality and performance. Our high-quality, globally-competitive equipment has an excellent track record for reliable and dependable performance. As the people serving our customers, we need to strive to complement this performance.

To this end, we have embarked on an initiative to up-skill - and multi-skill - our employees. By doing this, our customers can have one efficient interface with a single Renttech representative - receiving all the information and assistance they require from this single point-of-contact.

A further aspect demonstrating our dedication to continuous improvement to provide greater value and benefit for our customers, is the recent appointment of Vericon, a fellow member of the Bidvest Group, which is an acknowledged expert in all aspects of warehouse management. As Vericon is also a Bidvest company, their corporate business ethos and strategy is very much aligned with ours.

We are very excited about this development, and would encourage you to read more in this newsletter about how the Vericon team is

working closely with our distribution centre, to ensure our customers receive their products accurately, speedily and efficiently.

Speedily and accurately picked, packed, rigged and loaded products cannot go far without equally 'on the ball' transport and logistics. Our transportation division has also been thoroughly optimised, to ensure maximally efficient and cost-effective transportation of our products to our customers across the country.

Finally, we are working hard to ensure we provide our customers with the latest innovative global and local technology which the market has to offer. Our affordable and robust state-of-the-art welding equipment, technical assistance and process solutions for a variety of construction, fabrication and other industry applications are all game-changing examples of this type of innovation.

Enjoy reading about the above – as well as our very talented Renttech people who are the vital link with you, our valued customers.

In closing, I would also like to take this opportunity to wish you and your families a wonderful festive season, and all the very best for 2020!

Yours sincerely
Duncan

THE 'INVENTORY INFANTRY'

VERICON WAREHOUSE MANAGEMENT PROTECTS THE 'BEATING HEART' OF RENTTECH

Managing a mission-critical stockholding, particularly at companies such as Renttech with thousands of stock items which are critical to our customers' daily operations, is a vital and complex task. It can be likened to managing the blood flow from the 'beating heart' of the organisation.

The implementation of the best practice required to successfully manage warehouses such as the distribution centre (or 'DC' as it is referred to), therefore requires very specialised knowledge, experience and expertise.

"With this in mind, we asked fellow Bidvest company Vericon to take on the management of our extensive warehouse facilities or distribution centre (DC)," explains Renttech MD Duncan Whitehead.

The purpose of this initiative is to improve Renttech's stock management and distribution management; as well as to optimise stock levels, and the speed with which the picking, packing, transport and delivery to the branches is done.

"The quicker we can serve the branches, the quicker they can serve our customers," says Renttech Distribution Centre Manager Desmond John Joles or 'DJ', as he is known.

Vericon is therefore acting as a functional outsourced partner to Renttech - specialising in stock control. The company services a number of major blue-chip organisations, both within Bidvest and outside the Group. Vericon has been particularly successful in managing industrial warehousing.

"Ultimately, this initiative is about reducing the cost-per-unit shipped. This cost can be broken down into the cost of the actual item, the courier and labour costs, and licence fees - among others. Vericon has been set the challenge to reduce this cost by 30% in the next year. As part of this, they will be progressively multi-skilling the distribution centre team. Furthermore, Vericon is obliged to expedite orders within a maximum of 72 hours," DJ explains.

The services Vericon offers include full order processing - which embraces how stock is picked, packed and processed; as well as the management of stock movement and control. However, Renttech

retains responsibility for all planning, and procurement of stock.

Vericon analyses the cost and profitability of any site they are working at, aligned to the Japanese 'Gemba' management efficiency methodology.

Typically, Vericon will first of all scrutinise a client's warehousing practices and then makes recommendations about how they can be improved. Typically, this entails aspects such as stock control, stock cycles, stock category and popularity management.

"Having Vericon on board, is very much a benefit for our customers, because optimised stock control and management means products will be supplied quicker and more efficiently.

Regarding aspects of the operation such as 'bulk picking', Vericon can pick and pack a load in just 72 minutes. The company continuously benchmarks against similar warehouses," DJ points out.

"We are there to smooth out and optimise efficiencies - and to eliminate inefficiencies and, ultimately, ensure Renttech's customers receive their stock as accurately and quickly as possible," says Harry Currie, Operational Executive at Vericon, adding that Renttech is however still responsible for the strategic execution of the transformation of the Distribution Centre, and the implementation of systems.

"Together with Vericon as our outsourced stock and warehouse management partners, we are executing our strategic vision of a greatly optimised DC, managed in line with local and international warehouse best practice.

Renttech's knowledge of industrial equipment and our customers' requirements - together with Vericon's warehouse and stock management expertise - promises to be a winning combination - to the ultimate benefit of our customers, going forward," concludes Duncan.

'TRANSPORTING' CUSTOMER SERVICE TO ANOTHER LEVEL

In the business of equipment rental, logistics play an often unseen, unsung, yet absolutely cardinal role in the success of the company. At Renttech, Kobus De Nysschen, General Manager – National Productivity, manages the company's transportation division:

KOBUS DE NYSSCHEN
General Manager - National Productivity

Kobus manages a fleet of 18 vehicles comprising four large trucks based at Wadeville and 14 smaller vehicles for inter-branch transportation. In addition, Renttech's transport division employs the services of reliable subcontractors when demand for transportation exceeds certain levels. The subcontractors are required to work according to Renttech's service level criteria, and also need to meet stringent quality and performance stipulations.

"Since Renttech became part of the Bidvest Group, it is our policy to closely scrutinise in-house costs such as transportation, to ultimately achieve cost reduction – wherever feasible – for our customers," explains Renttech's MD Duncan Whitehead.

However, transportation comes with a host of challenges - one of the principal ones being to satisfy customers – sometimes at extremely short notice.

Kobus and his team are used to this: "We have to strive to build relationships with our customers – both internal (Renttech's

nationwide branches); as well as external (the end customers) – and to consistently demonstrate our reliability. For example, is crucial that our loads are delivered on time, as we understand that our customers are invariably under time pressure," he says.

A key aspect to Renttech's transport and logistics operations is the movement of very large quantities of equipment to companies - such as South Africa's refineries - at times when they need to carry out annual / periodic plant shutdowns. During these projects, thousands of subcontractors are involved, all of whom require access to high-quality generators, compressors, welding machines and other construction-related equipment.

"Plant shutdowns require the unstinting efforts of everyone in Renttech; and require a vast amount of careful, strategic planning to be successful," Kobus continues.

Various methods are employed to transport equipment at these times, and use is made of containers, pallets or 'break bulk'

transportation. Each of these transportation systems has its own set of lifting and rigging challenges, which vary according to customer demand, on a daily basis.

"We need to be ready and able to transport some 600 equipment lines - and to do this efficiently, we employ trained and qualified load masters," he explains.

With any operation of this nature, it is the unseen 'backroom' work which is absolutely vital to containing transportation costs. Much effort is therefore invested into forecasting what loads will need to be moved, as this also ties into the company's overall financial planning.

For example, the company has to budget for volatile fuel costs. If one considers that Renttech's fleet clocks up some 560,000 km a month, it is clear that transportation is a major budgetary item. With trucks covering these enormous distances, detailed planning of all-important maintenance is also essential.

To contain these costs for the benefit of customers as far as possible - and to improve overall operational efficiency - Kobus and his team also do careful trip scheduling and route optimisation. In addition, every load is of course insured, tracked and protected in transit to its destination.

When trucks return to base, drivers are debriefed to assist with further route optimisation. This is in line with Renttech's continuous improvement ethos, and results in better time and fuel efficiency on the part of the transportation division.

"It is no secret that the equipment rental business is highly competitive. As the most professional construction equipment rental company in South Africa, we take pride in ensuring our valued customers receive quality, cost-effective products timeously, supported by superb service. Our transportation initiatives are but one of our many efforts to ensure we deliver effectively on this objective," Duncan concludes.

LATEST DIGITAL WELDING TECHNOLOGY AND FIRST VALIDATION FACILITY IN SA

Renttech South Africa recently launched the first local validation facility which is able to provide a service to industry validating welding equipment according to ISO 17662 standards. The company also offers customers the latest digital welding equipment:

In close collaboration with the South African Institute of Welding (SAIW), Renttech has improved its processes, to incorporate international testing standards for validation of welding equipment as required by companies accredited according to ISO 3834.

"In order to comply with the requirement of most big projects, construction companies need accreditation according to the ISO 3834 welding quality standards. With respect to welding equipment, ISO 3834 requires that all welding machines used must be validated to ensure that the actual welding current and/or voltage output delivered during welding accurately matches the parameter settings," says Renttech's Welding Product Manager Johan Bester.

"An external authorised inspection authority (AIA) certified our process for the delivery of performance certificates according to ISO 17662, the equipment calibration, verification and validation standard. This is also now incorporated into our ISO 9001 quality management systems via a formal scope change. All new equipment sold - as well as our rental fleet - now gets validated according to this standard before reaching the customer.

This is also an additional service that we offer customers for their existing equipment irrespective of brand, and we are in fact the first local company to provide this validation facility," Johan advises.

The company has also recently launched its new UNlarc range of welding equipment, with a host of associated cost benefits and technical advantages for customers all aimed at reducing the time and cost per weld.

"For the past 3 years, we have been engaging with some of the best welding machine manufacturers from all over the world so as to improve and complete our range to suit the demands of our rental and sales markets.

UNlarc is a brand that has earned itself a reputation for reliability and performance in some of the harshest South African conditions over the last 20 years, in all sectors of the industrial market. With the rapid advancement of software technologies available today, we embarked on improving our existing offering to realise the benefits of these technologies for our customers; thereby further enabling them to drive welding and fabrication efficiencies," Johan explains.

He continues: "Our challenge was to ensure that we made it easy and

intuitive for the welder, while also unlocking benefits for the business owner. Some of the benefits include reduced fettling costs, reduced distortion, reduced material handling costs, more effective use of labour, and increased deposition rates in the various welding positions."

Another key requirement was to further improve reliability, speaking to the need to reduce cost-of-ownership. Various technologies have therefore been added to protect the equipment from unstable input power, voltage drops associated with fixed line input power; as well as mobile generator power.

"On the back of these improvements, we have been able to increase our standard warranty from a 1 year to a 3 year parts-and-labour warranty on our 3 phase machines; and an 18 month warranty on our single phase units. All of this is backed up with parts and qualified technicians available across the country - ensuring minimal downtime," Johan advises.

He adds that, as with all Renttech offerings, their welding machines are sold 'ready to weld', with all of the necessary torch consumables and accessories, and integrated water-cooling as an option; but can also be offered as a tailored solution based on customer requirements.

"We wanted to make a contribution to enable the South African industry as a whole to be more competitive, by providing our customers with the latest technologies - whether they are one-man businesses or multi-national construction companies.

We believe we have achieved this without compromising quality. In fact most of our units offer more features than those of our international competitors at a very favourable price point," he concludes.

GAME-CHANGING RENTTECH SCANS NEW HORIZONS

DJ JOLLES
DC Manager

The SAPREF shutdown is the largest event of this type that the company has taken part in. During the SAPREF shutdown, to facilitate the entire process, Renttech introduced the use of its innovative new scanning system:

This is a first in South Africa of its type and was developed internally within Renttech. As an industry first, this illustrates our capability to be a game changer in the rental industry.

Desmond John Joles or 'DJ', who was instrumental in developing the new scanning system, began working at Renttech as a technician but was soon transferred to the Distribution Centre. Today, he is in charge of this facility. DJ has a supply management degree, and has honed his product knowledge and background extensively. In terms of experience, he has worked in the branches as well as at head office.

Working initially as a systems administrator in the Distribution Centre, he realised the urgent need for a computerised scanning system onto customer sites. To this end, for the past eighteen months, DJ and his colleagues have been working on developing the Renttech scanning system, which was the first in this particular market.

The scanning system was mobilised at the beginning of the SAPREF shutdown. It proved to be very user-friendly, and also cut down on delays in getting equipment onto site, allowing for asset control on site; and for better analysis of exactly which equipment will be needed in future shutdowns.

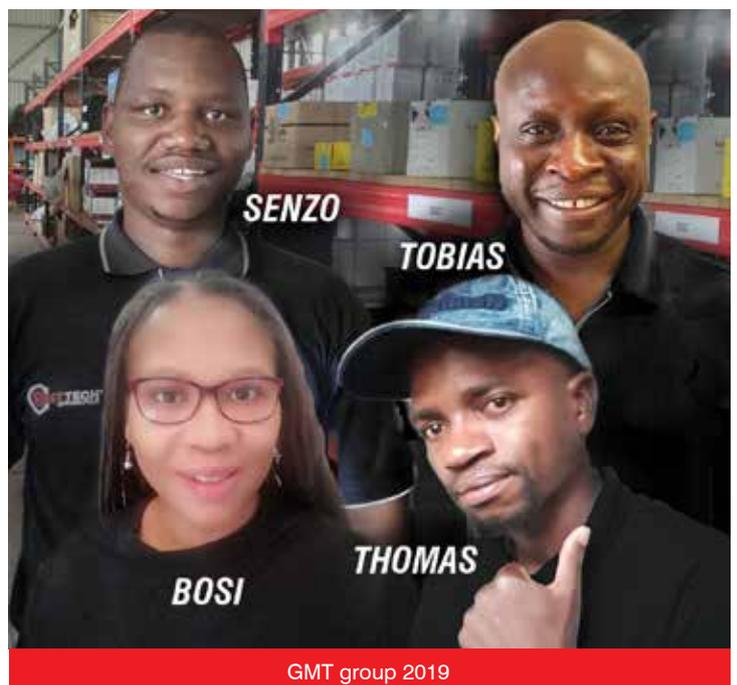

"We are now ready to roll out the scanning system, not only at major shutdowns, but in our general day-to-day business.

With this greatly improved control of assets, we have found that both Renttech and the customer save money. With this system, it is not only possible to manage the customer's on-site stores and our rental equipment; but it enables Renttech to become the customers' outsourced industrial asset manager, a development which is a real game-changer in the equipment hire industry," DJ concludes.

RENTTECH STAFF GET THE EDGE WITH MANAGEMENT TRAINING FROM BIDVEST

This is the first group of Renttech 'student' employees which attended the Generic Management Training from Bidvest Edge. As a member of the Bidvest Group, Renttech is able to take advantage of a range of training courses offered. One of these is a SAQA-accredited course in Generic Management Training (GMT).

Our 'Renttech-ers' gave the training their very best efforts, and successfully completed the course. All participants have now been certified as competent by the Services SETA.

GMT group 2019

WOMEN POWER:

CELEBRATING RENTTECH'S STRONG WOMEN!

GIOVANNA WRIGHT
National Supply Chain Manager

We are so proud of each and every one of our successful and empowered Renttech women, who are all doing great things in what used to be a male-dominated industry! Read on to discover more about some of these inspiring ladies...

Renttech National Supply Chain Manager, Giovanna Wright, was selected to attend management training sponsored by Bidvest Commercial Products at the Gordon Institute of Business Science (GIBS) business school.

Twenty-two middle-to-senior executives from various Bidvest companies attended the course. Of these, six were women, all of them senior in the Bidvest organisation. For managers at an executive level, the courses were intended to improve their strategic thinking, among other things.

The students also participated in an Action Learning Programme (ALP), where course participants were required to identify certain challenges within Bidvest and then come up with all the possible solutions to address these. Giovanna's particular group came up with a 'disintermediation' model, relating to the process of 'taking out the middle-man' in business.

The outcome of this training was also that the learnings of the students were reinvested in the Bidvest Group. From Giovanna's perspective, she

explains that it really 'opened her eyes' to strategic thinking and has enabled her, as Renttech's National Supply Chain Manager, to think and operate more strategically.

In addition, Giovanna is focusing on assisting staff at the branches to implement some of what she learned during her GIBS training. "I was also pleased to see that there is also a significant role for senior women within Bidvest," she concludes.

MBALI TSHABALALA

Senior HR professional Mbali Tshabalala was employed to establish a proactive in-house human resources department and ensure it operates efficiently, assisted by an HR manager, as well as a number of female HR interns:

MBALI TSHABALALA
Human Resources Department

"In this industry, human resources departments tend to be fairly male-dominated. At Renttech, we are keen to observe and be compliant with empowerment equity requirements, in particular with regard to gender employment," Mbali says.

On this note, she also explains that there is a large degree of openness and inclusivity within the company. She appreciates the support that she has enjoyed from MD Duncan Whitehead in this regard.

As a manager, Mbali explains that she is very strong on communications, and she constantly promotes a culture

of openness and freedom of speech.

As a person, she characterises herself as strong-willed and confident. She believes in being firm, assertive and standing up for herself. "I do not believe in letting issues lie, but would rather deal with them promptly - and I am very firm on respect for colleagues," she continues.

In terms of gender diversity, she sees that female managers in the industrial sector have to work hard to win the respect of their male counterparts.

Equipment rental in particular is a very competitive industry, and women in this space need

a lot of support from the Human Resources Department. In addition, while not everyone is born to be a leader, the best employees are those who in difficult circumstances take control and get things done, Mbali explains. They are keen to grasp training opportunities to further themselves.

"We encourage all our staff to take advantage of training and development opportunities that both the business and the greater Bidvest group offers.

However with this training and development, there also has to be the willingness to take on responsibility," continues Mbali.

"Training has the power to open doors - and Renttech is keen to get the younger echelon taking responsibility and growing into leadership positions," she concludes.

NITA DU PLESSIS

Nita du Plessis joined Renttech some 12 years ago as a receptionist, and was promoted into the rental department. After a few years in rentals, she moved into sales with responsibility both for internal sales and external sales. Four years ago, she took over the Rental Department in Wadeville:

The past four years have been very successful for Nita and her team. "Yes, I do try hard all the time," she says with a smile.

This success has been reflected in the growing turnover of the Rental Department.

Asked what the secret of that success has been, Nita explains: "In the Rental Department, we believe that customer service is all-important, and that the customer comes first. It is the customer who pays our salaries ultimately, and if they are happy, then Renttech can only grow!"

The Rental Department has to deal with a very diverse range of customers, although many of them come from various facets of the construction industry, and much of the Rental Department's equipment is hired by contractors working on major construction sites.

Nita and her team have pushed on steadily, and focused on customer service excellence - which has the Rental Department growing steadily.

NITA DU PLESSIS
Rental Department in Wadeville

WOMEN AT THE FRONTLINE.... CECILLE STRYDOM

Q: How would you best describe your role within the company?

A: Being an executive assistant to the MD makes me feel like I'm part of something bigger. I love making peoples' lives run more smoothly and efficiently, and I believe an executive assistant is implementing business-critical instructions from management; as well as assisting in averting crises and acting when required as the face and voice of executive management within the company.

Q: What are some of the more challenging aspects of your job?

A: When I am being pulled in multiple directions at the same time! However, to cope with this I focus on remaining calm and collected. I make action lists and prioritising tasks in order of deadline and order of importance. This clears my head and helps me finish all my tasks on time.

Q: What do you find most fulfilling about your position?

A: As the Executive Assistant to our MD Duncan Whitehead, I touch on all key aspects of the company's operations, including getting to know almost everyone at the company. As a result of being a 'front-and-centre' resource for our MD and his management team, I learn a lot from this, and how Duncan provides strategic direction and leadership, positively influencing the team as a whole.

I also enjoy the ability my role provides to develop new skills daily. I work with everyone and do a little bit of everything, so I also learn a little bit of everything. This is a huge help in my day-to-day role.

Q: As executive assistant to the MD, you fulfill a key role as a conduit between the MD, senior management and staff at Renttech; as well as fellow companies within the Bidvest Group. What is your secret to ensuring you are organised and that nothing slips through the cracks?

A:

- **Communication Skills:** Excellent written and verbal communication skills are critical in this field whether speaking on the phone, writing an email or participating in a meeting.
- **Organisation:** With files and information everywhere, you must be able to develop a strategy to keep everything in its place.
- **Multi-tasking:** With so much going on, I have to be able to multi-task successfully, to attend to multiple tasks at once.
- **Problem Solving:** Plans, strategies, and schedules change, and so I have to be adaptable and able to problem-solve effectively.
- **Initiative and independence:** I must be sufficiently independent to be able to take the initiative, and ensure that my boss is on track with his schedule; as well as the team members I work with.
- **Proactive:** I should be thinking far into the future at all times, so I can step in when required and assist with whatever situation arises.
- **Active listening skills:** it helps to be efficient in my job if I remember things after hearing them only once — and active listening skills will help me to do just that.

CECILLE STRYDOM
Executive Assistant to Duncan Whitehead

- **Punctuality:** This helps help me to make sure that we meet all deadlines, that I keep my boss's schedule up to date, and that I perform tasks to the required standard.
- **Positivity and energy:** This helps me form good working relationships with my colleagues, deliver high-quality work, and to create a good impression in the eyes of all whom I deal with on a daily basis, including our valued customers, suppliers and our staff. I maintain a positive attitude, and I really enjoy the work that I do!

CYNTHIA SELEPE

Q: How would you best describe your role within the company?

A: Together with my colleague Hazel, I am the person who receives and directs all our visitors. I am the first person they see or speak to when they come to our office, and it is my job to ensure they feel welcome. In addition, I am responsible for making sure all staff and visitors connect with the people they are there to meet.

Q: What are some of the more challenging aspects of your job?

A: I sometimes deal with frustrated people, or possibly just people who are having a bad day, and it falls on me to be able to calm them down so that I can properly assist them. Everyone is different, so I have to use my intuition on how to best deal with each situation.

There are also days when the call volume is extremely high, which means I must be able to juggle various calls at the same time whilst maintaining a high standard of phone etiquette. At the same time, I am in charge of managing the waiting area, and it can become a challenge when

you have a number of people on the line and also in front of you – all waiting for your attention.

Q: What do you find most fulfilling about your position?

A: I find it fulfilling and also very empowering that I have a fair amount of autonomy when it comes to doing my job. I am experienced at what I do, and the management team trusts me to do my job well. That gives me the confidence to keep growing and become even better at what I do.

Q: As one of the first points of contact, you play a significant role in how the company is perceived. How do you try to represent Renttech on a daily basis? What impression do you strive for?

A: We have set high standards for ourselves at Renttech, and each day I make a conscious decision to align with our ethos and vision of quality, performance and customer service. In my position, this approach shines through in the detail, from how I speak to people, to how quickly I help them resolve a query – the level of quality is always at the back of my mind, no matter what I do.

CYNTHIA SELEPE
Receptionist at Renttech SA

HAZEL NKOSI

Q: How would you best describe your role within the company?

A: Together with my colleague Cynthia, I am the first line of contact for many customers and other visitors; and it is my responsibility to ensure that the quality and values of our brand shine through, from end-to-end.

Q: What are some of the more challenging aspects of your job?

A: One of the more challenging aspects is dealing with emotions. I often deal with people who are in a rush or irritated and it can be very tricky to keep them calm while their query is resolved. You need to be very aware of different personalities and have a knack for predicting how people are going to react in order to best assist them.

Q: What do you find most fulfilling about your position?

A: Ensuring that our valued customers

are satisfactorily assisted. It is extremely gratifying when a customer thanks me for helping them – that is when I know I have done my job well!

I also make a point of maintaining a good work-life balance, because I firmly believe that is what enables me to perform at my best each day.

Q: As one of the first points of contact, you play a significant role in how the company is perceived. How do you try to represent Renttech on a daily basis? What impression do you strive for?

A: My main role is to ensure all customers are assisted with any queries or challenges to the best of my ability; and in doing, so I help to build our company's reputation for excellent service. I find that staying positive and confident in my role helps make customers feel confident in us as a business.

HAZEL NKOSI
Receptionist at Renttech SA

RENTTECH 'WELDING ON THE VAAL'

The Renttech 'Welding on the Vaal' event is a welding and construction equipment festival and exhibition, taking place at Stonehaven on Vaal on the 28th and 29th February 2020:

"In this bumper show, we will be showcasing the full range of Renttech's products, which includes various welding machines, welding generators and ancillary equipment. In addition, we will also be showing Renttech's lifting and rigging equipment," explains Renttech's Sasolburg Branch Manager Zelda Edkins.

"Those visiting our Welding on the Vaal event will get to see the very latest in welding and rigging technology," Zelda adds.

"As this is such a key event for us, we elevated this above branch level and have called in Renttech people from all over South Africa to assist. These staff members will be present to explain and demonstrate our products during the course of the show," she enthuses.

The show is aimed at Renttech's customers and prospective customers in the steel industry, an area which the company has been developing rapidly in the past couple of years.

"We are also involving national welding schools and universities," Zelda continues.

"On the day, we will be running the largest welding lesson in the world with more than 500 people participating. We are aiming to break a world record. Apart from this world's largest welding lesson, which those attending can participate in as well as trying out some of Renttech's superb welding equipment, there will be some other surprises for industry which Renttech will be unveiling at the show," she concludes.
